

***Marshall Worth, Senior Product Manager, POWERSECURE, INC.***

Mr. Worth is a Senior Product Manager for PowerSecure, Inc., a wholly owned subsidiary of Southern Company. PowerSecure is a turn-key provider of basic and advanced microgrids in North America. Mr. Worth has led efforts in energy solutions for the US Army and Marines, investor-owned and public utilities and private sector customers. For 10 years, he led the battery energy storage program engineering at PowerSecure and was responsible for all aspects of these projects, from contracting, design/develop/manufacturing to installation/integration and operations. He has participated and led efforts in furthering the technology readiness level of battery energy storage systems (BESS) and today actively participates in the national safety and reliability discussions of these systems. Marshall is currently responsible for the development of BESS (both software and hardware) at PowerSecure and the integration of new generation technology into its traditional offerings. He is also responsible for the development of advanced AI/Analytical techniques which aid in the dispatch of energy and provide insight into the health and safety of these systems. Marshall holds a BSEE from the University of Colorado, with more than 10 years of experience in the industry.
