

Solar Power

Finance & Investment Summit

The Leading Networking and Dealmaking Hub for the Solar Industry *returns to San Diego and goes online this October!*

The *Solar Power Finance & Investment Summit*, recognized as the leading site for interaction with the industry's deal makers is returns in a combined live/online version. The event, as in former years, will provide the best update on the status and outlook for the financing of solar projects in North America in today's environment. Re-engineered for the COVID-19 era, it will provide this update for both in-person and virtual attendees.

Moreover, Solar F&I—while redesigned to provide for social distancing—will continue to offer an opportunity for one-on-one networking with the leading development executives, financiers, investors and advisors in the industry, again including both those at the event and those online as well.

From beginning to end, the Summit will offer up constant opportunities to interact with key dealmakers, to learn about their plans for the upcoming year and capitalize on new prospects that will lead to successful deals.

The Summit's unique combination of information and networking has led previous attendees to rate it as the best value solar event in the industry— “worth every minute of my time” says one attendee. This year's combined live/online event will continue to deliver these benefits.

Executive Briefing- October 6, 2020
