

Steve Peltier

Steve Peltier, is the Procurement Director for National Grid's US Transmission and Renewable Generation businesses. He has a wide range of category management expertise and over 6 years of experience leading procurement and contracting for utility scale energy storage. Steve personally led the contracting for National Grid's first owned and operated energy storage project, Nantucket's 48MWh Tesla battery; oversaw the implementation of the Non-Wires Alternative (NWA) tender program in NY; and represents National Grid in all energy storage Joint Venture companies including the successful Long Island JV with NextEra. Additionally, Steve has spent several months abroad working directly with cell, module, and inverter manufacturers in EMEA and APAC giving him extensive insights into the upstream BESS supply chain, various contracting models, and emerging risks. Steve is a graduate of Boston College and currently resides in in Massachusetts with his family and their maltipoo puppy Winston.
